MULTI-FUNCTION POD MOUNTING ADAPTOR

Getting your POD where you want it is a cinch with the versatile, bullet-proof POD Mounting Adaptor. Its innovative design of folded, heavy gauge metal includes four rubberized pins that slip snugly into the four mounting holes on the bottom of your POD, holding your POD securely while making assembly a snap. Holes for screws are included to attach the mount permanently to your POD, or to attach the mount-and-POD assembly to a desktop or other setup. The mount is angled to tilt POD toward you for easy operation on stage or in the studio, and an included locking ring locks your POD on top of any standard mic stand or hardware that has standard mic mount threads.

This same versatile mounting adaptor is also designed to slip under the handle of a guitar amp, giving your POD a secure footing, and keeping it always easy to reach.

No matter where you want your POD, this mount can get it there.
Scratch-resistant black powdercoat.

CUSTOM-TAILORED BAGS & COVERS

Covers are available for all Line 6 amplifiers, featuring custom-fit and heavy-duty construction.

When your POD or Floor Board's ready to travel, there's no better way for it to go than in one of these custom-tailored carry bags. In the POD bag, your POD is cradled snugly in its own padded, zippered compartment, alongside a separate padded and zippered compartment for the POD power supply and cabling to enjoy the ride. The Floor Board bag has a main compartment tailored for the Line 6 Floor Board foot controller with room to spare for your pedal cable and other cords, *plus* a separate compartment perfect for the POD or other equipment.

All feature heavy duty, rip-and water-resistant fabric with embroidered Line 6 and POD logos. Bags include easy carry handle and adjustable, detachable shoulder strap. **Black with white logos.**

PX-1 POWER SUPPLY & EX-1 EXPRESSION PEDAL

USA PX-1 power supply works with POD and Bass POD, as well as the Stomp Box Modeler pedals.

EX-1 Expression Pedal lets you morph between settings for Stomp Box Modeler pedals, or control the volume pedal or wah effects of an AX2 amplifier.
